SUMMARY

Motivated and detail-oriented Software Developer Intern with a strong interest in building useful and practical applications. Able to understand project requirements clearly and turn them into effective solutions. Experienced in working on real-world projects that improve system efficiency and user experience. A responsible and adaptable team player who works well in collaborative environments and is eager to learn and grow as a software developer.

INTERNSHIP

CANZA TECHNOLOGY CONSULTANTS—Software Developer Intern April 2026

- Built full-stack applications using Python (Flask, Django, FastAPI), developed REST APIs, implemented role-based authentication, and integrated Mistral LLM with NLP for AI features.
- Optimized MySQL databases and deployed ML models (Brain Tumor Detection) with performance tuning, testing, and Git-based version control.

EDUCATION

Sri Ramakrishna College of Art & Science Bsc Computer Science (AI & DS) **2023 - 2026**
CGPA: 7.0

Government Hr. Sec. School HSC (12th Grade) 68%

PROJECTS

E-Ration System Web Application

Developed a web-based E-Ration System using Python (Flask), HTML5, CSS, JavaScript, and MySQL to digitize and automate public distribution processes, ensuring secure authentication and real-time data management.

Mind Nest Application / AI Integration

MindNest is a Django-based full-stack mental health web application featuring secure authentication, mood tracking, journaling, mentor management, and analytics dashboards. It integrates an Ollama-powered LLM chatbot for AI-driven conversations, built on a scalable, RESTful architecture with ATS-friendly modern tech stack.

Brain Tumor Detection (ML Based) Machine Learning / Computer Vision

Developed a CNN-based brain tumor detection model using Python, TensorFlow/Keras, and OpenCV to analyze MRI images and provide real-time prediction through a web interface.

Driver Drowsiness Detection System Machine Learning / Computer Vision

Developed a real-time safety application using Python and OpenCV to monitor eye movements and alert drivers upon detecting fatigue.

Curio Mind (Personalized Learning Platform) Web Application

Built an AI-driven platform using Next.js, PostgreSQL, and React to adapt learning paths based on student performance.

TECHNICAL SKILLS

Programming Languages	Python, JavaScript
Machine Learning / AI	Scikit-learn, TensorFlow/Keras, NLP, CNN, NumPy, LLM Integration (Mistral)
Frameworks / Databases	Flask, Django, MySQL
Frontend	HTML, CSS, ReactJS
Tools	Git, VS Code

SOFT SKILLS

Quick Learner
Analytical Thinking
Team Collaboration

CERTIFICATIONS
